Experience

Full Stack Developer | *NestJS, TypeScript, React, AWS, Redis, MongoDB* *June 2023 – Present*
Rubick (Textmercato)

- **Built an MCP (Model Context Protocol) server** exposing **50+ AI-agent tools** across 7 domains (PIM, orders, tasks, users, orgs, exports), serving **5K–7K agent calls/day** with RBAC permission checks and per-tool rate limiting.
- **Launched Scout, a multi-tenant Crawling-as-a-Service platform** end to end, processing **10K+ URLs/day** for **4+ paying organizations**; built cost and latency-aware provider routing, headless JS rendering, job queues with DLQ, cron scheduling, HMAC-signed webhooks, SSRF protection and **1,000 req/min** API-key rate limits.
- **Automated catalog onboarding for a fashion & beauty marketplace** by porting a VBA macro into a TypeScript rules engine with **9,000+ brand mappings** at **~90% accuracy**, eliminating manual macro runs, scaling uploads to **5,000 rows/sheet** and shipping **8 zero-regression dataset upgrades**.
- **Architected a multi-tenant marketplace platform** with **12+ marketplace export templates** (Amazon, Myntra, Flipkart, AJIO, Meesho, Shoppers Stop) and automated order workflows, reducing manual operational overhead by **65%**.
- **Optimized system performance**, reducing API P99 latency by **98.5% (1s to 15ms)** via Redis caching, cutting a core API **10x (1s to 100ms)** by eliminating N+1 MongoDB aggregations, and shrinking payloads **9x** with Gzip and CDN.
- **Scaled heavy report exports** using Piscina worker threads, S3 streaming and MongoDB read replicas to support **30K SKUs per file**, eliminating out-of-memory crashes and **502 errors** on large Excel uploads.
- **Reduced AWS costs by ~$1,300/month (~24% of monthly bill, ~$15K/year)** via a 3-tier EBS snapshot lifecycle (DLM), on top of an earlier **20%** cut from CloudFront and S3 Glacier archiving; remediated Docker CVEs.
- **Developed custom Shopify integrations** for product and order sync, onboarding **300+ brands**, backed by **RabbitMQ** async processing and **Prometheus/Grafana** monitoring and alerting.
- **Delivered an enterprise price-benchmarking dashboard** comparing 2 marketplaces (MERN, Auth0 SSO, CI/CD to AWS App Runner) covering price competitiveness, coupon depth and fees, with ETL data-quality checks.
- **Honors:** Awarded **Rubick AI Star Performer** for exceptional technical leadership and delivering high-impact feature sets ahead of schedule.

Software Engineer Intern | *Hapi.js, Joi, Node.js, MongoDB, Razorpay* *June 2022 – June 2023*
Rubick (Textmercato)

- Engineered secure RESTful APIs with **Hapi.js** and **Joi** for Auth, OTP and Razorpay payments, achieving **95% unit test coverage** (Mocha/Chai), and delivered the responsive *Rubick.ai* landing page.

Skills

Languages: TypeScript, JavaScript, Python, SQL

Backend/Cloud: Node.js, NestJS, Express, REST APIs, Microservices, MongoDB, PostgreSQL, Redis, RabbitMQ, Docker, AWS (EC2, S3, CloudFront, App Runner), CI/CD, Prometheus, Grafana

Frontend/AI/Tools: React, Redux, Tailwind CSS, MCP, LangChain, LLM Agents, Auth0, Jest, Mocha/Chai, Git, Postman, Shopify App

Education

Rungta College of Engineering and Technology *2019 – 2023*
B.Tech in Computer Science and Engineering

Projects

Loadflux | *Node.js, SSE, Express, Chart.js* npm | Docs

- Engineered an **embeddable, zero-config monitoring dashboard** for Node.js apps, providing real-time visibility into system health and API performance via a single middleware.
- Implemented deep **application telemetry**, tracking event loop delay, heap usage, and GC pause times to help developers identify memory leaks and performance bottlenecks.
- Built an **analytics engine** to calculate latency percentiles (p50/p95/p99) and error rates across endpoints with configurable data retention policies.
